Abstract: It is no surprise that research on digital transformation (DT) has raised vast interest among academics in recent decades. Countries, cities, industries, companies, and people all face the same challenge of adapting to a digital world. The Business world is evolving into a digital one. The COVID- 19 pandemic has accelerated this phenomenon. Digital transformation (DT) has gone from being a technological opportunity to a pure necessity for managing the needs and expectations of the world's growing population. Helping small and medium-size businesses use and maximize technology is what Intelligent Technical Solutions (ITS) has been doing for 20 years. This research explores the intricate dynamics of disruptive innovations and the evolving factors that influence their trajectory over time. Our study deals with multifaceted nature of disruptive innovations, emphasizing the interplay between technological advancements, market dynamics, organizational capabilities, and regulatory environments. By conducting a comprehensive analysis of case studies and longitudinal data, we uncover the temporal evolution of these interdependencies. Our findings provide valuable insights for businesses and policymakers seeking to navigate the disruptive innovation landscape effectively, offering a nuanced perspective on how strategies should adapt over time to harness the full potential of disruptive innovations.
